Subject: Your Results

Dear ARHAM LODHA,
 The radiologist thought there may indeed be a small fracture of the radial head, the sore area in your elbow.

NO need for a cast. It is okay to continue to use the sling for a few days, but best to keep using the ice pack and otc ibuprofen, up to 600 mg 3x/day with food and/or acetaminophen, up to 500 mg 2 tabs 3x/day x 3-5 days as needed for pain relief.

It is SUPER important to get out of the sling and start moving your elbow as much as possible in a few days, when the swelling goes down and it's feeling better. I'll have the nurse get you scheduled to see one of the Sports Medicine doctors next week for a recheck.

AUSTIN, TX 78712

BODY

ELBOW, 3 VIEWS - LEFT, FOREARM, 2 VIEWS - LEFT: 9/18/2024

CLINICAL HISTORY: L elbow pain.

COMPARISON: None available.

FINDINGS:**LEFT ELBOW:**

Nondisplaced, mildly comminuted acute fracture of the radial head is suspected. No dislocations. Anterior joint effusion is present. No radiopaque foreign bodies.

LEFT FOREARM:

See above. No additional acute fractures or dislocations of the left forearm. No radiopaque foreign bodies.

IMPRESSION:

Nondisplaced, mildly comminuted acute fracture of the radial head is suspected. Correlate for focal tenderness.

I have asked the Radiologist Assistant to call these results on 9/19/2024 9:04 AM.

Mike S. Nguyen, MD
